

HISTORIC ACCOUNT

The world's leading maker of tubulars...
The firm, founded in 1898, has specialized since the beginning in the manufacture of tyres and inner tubes for bicycles, racing tubulars, and, more recently, tyres for mopeds.

Originally a one-man business, then a family firm, Wolber is now a public company with 900 employees at its 30,000-square-metre works at Soissons. It produces about one and a half million tubulars a year.

Its constant interest in the manufacture of racing tubulars, its experience, and the equipment it has brought together for the manufacture of ever growing numbers of tubulars make it the world leader in the field.

Today, Wolber tubulars are sold on all five continents. More than 35 % of sales are abroad.

Wolber is the first maker of tubulars in the world to have developed a tubeless, seamless tubular, which can be repaired using a special kit also developed by Wolber.

Their technical superiority and performance have made Wolber tyres and tubulars leaders throughout the world.

Since 1979, Wolber has been making the famous Super Champion and Record alloy rims at its Soissons works.

Wolber's experience, together with new manufacturing techniques developed by Wolber, assures a high-quality product chosen by the most knowledgeable cyclists.
