

# PERFORMANCE

Many cyclists have indicated a desire for the quality, ride and handling of a Klein at a price they can afford. Now, we have what they have been waiting for. The production Klein. The strongest and stiffest frame available. Only 3¼ lbs., bare frame weight. Klein technology and frame design result in secure and balanced handling, ride and high power efficiency.

The Performance frameset and bicycle, like every other Klein, provides a quality of performance above and beyond that available from any other source. Expensive frames made elsewhere feel heavy and awkward in comparison. The invention of the Klein frameset (patent pending), provides a revolutionary concept in frame construction and an exciting new riding experience.

The Performance frameset has been priced to cost less than many framesets made of steel. It is an excellent touring or racing bicycle with the appropriate component packages described in the specifications. Available in sizes 54, 56, 58, and 60 cm. as either a frameset or a complete bicycle.

The frameset is finished with a durable coat of Deltron in a beautiful fawn silver. Even at the low price, each frameset comes with heavy duty sealed precision bearing bottom bracket installed, 2 water bottle mounts, a custom fitted chrome silca pump, rack mounts, aero shift levers, and all cable guides. It is fitted for a Suntour braze-on front derailleur.
